Weather-independent robot mower

The quiet Greenworks Optimow

Can be washed with the hose

No more having to mow yourself and yet always being able to enjoy freshly mowed lawns. Greenworks promises this for its Optimow lawn robots. For less than 1,000 euros and 1,200 euros respectively, there are the two machines, which always hold up to 1.000 and 1,500 m² of lawn respectively in the length of a fluffy carpet. They are controlled via GSM and the smartphone. They are so quiet that they can even work at night. The IPX5 protected Greenworks Optimow's are easy to clean - simply remove the housing, spray with the garden hose and clean with a brush.

The installation requires neither special craftsmanship nor a green thumb. Depending on the size and complexity of the garden, this one-time effort can be completed in two to four hours. The perimeter wire is simply fastened to the floor with the corresponding mounting dowels. After only four to six weeks, it is ingrown into the soil and no longer visible. The wire also protects beds or shrubs, pond and swimming pool. Walls and trees detect the Optimows with the help of their collision sensors.

The Optimows are controlled via the GreenGuide App (GSM) from the smartphone. All functions can be adapted via mobile GSM even without need of W-LAN. The current position is also shown on a map in the display due to the onboard GPS in the mower. As long as you have your smartphone at hand, the GreenGuide app gives you full control even on vacation or in the office. Start, stop and cutting height

Press Information

can also be controlled on the mowers without app though in daily use.

Both mowers are IPX5 weatherproof. This means that they can withstand all weather conditions. To protect the grass, however, rain and frost sensors ensure that the mowers only cut when the grass is not destroyed.

With the app you can set the time of day at which the mower is allowed to work. Or you can simply switch them on and off using the onboard buttons if required. The low noise level - as quiet as a TV at room volume - means that the mowers can be used at any time without disturbing the neighbours.

The GreenGuide smartphone app prevents unauthorized use of the mowers. Equipped with GPS and mobile connectivity, they can be located anytime, anywhere in the world.

The devices are designed in such a way that they do not require regular service. Simply fully charge the batteries before winter, before storing the mowers for hibernation.

All Optimow's work with brushless motors, have a cutting width of 22 centimetres and can be adjusted to a cutting height of two to six centimetres. They can cope with hilly, uneven terrain on slopes

The Optimow lawn robots will be available from spring 2019.

Further information on this topic can be found at Greenworks Tools, 50996 Köln.
